Developmental Biology

An International Journal
Published under the Auspices of the
Society for Developmental Biology

EDITOR-IN-CHIEF: Elizabeth D. Hay

ASSOCIATE EDITORS

Igor B. Dawid
David Epel
Gerald D. Fischbach
Donald A. Fischman
John W. Saunders, Jr.
Herbert Stern
Robin A. Wallace
Norman K. Wessells

ASSISTANT EDITOR: Mary J. Powers

FEATURE EDITORS

Eugene Bell
Francis J. Manasek

ADVISORY EDITOR

Mac V. Edds, Jr.

VOLUME 36, 1974

Information for Authors

Developmental Biology will publish in English original papers bearing on problems of evelopment in the broadest sense; it will contain papers dealing with embryonic and post-nbryonic development, growth, regeneration, and tissue repair, both of plants and ani-als. The journal will serve as meeting ground for studies on development employing chniques of a wide range of disciplines, e.g., biochemistry, biophysics, cytology, experi-ental morphogenesis, teratology, genetics, immunology, microbiology, pathology, harmacology and physiology.

Articles should not exceed 15,000 words and should be accompanied by an abstract that ves, in 200 words or less, a synopsis of the work including methods and results. *Brief Notes* must not exceed 2000 words. The usual format is: abstract, introduction, methods nd materials, results, and discussion, but authors are encouraged to present their mate-al in the most logical and appropriate form. Indicate the address for galley proof. In or-er to save time, page proofs will not be sent to authors. Our aim is to keep the publication me less than 6 months. Two copies of the manuscript (the original and one carbon) and wo copies of the figures should be mailed to Dr. Elizabeth Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about 8-½ x 1 inches in size, with the pages numbered consecutively. Include with full length articles running page headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at ll. Cite them, using superscript numbers, in consecutive order in the text. Type them onsecutively on a separate sheet. Acknowledgments and figure legends should also be yped, double-spaced, as separate sections.

Tables should be used to condense data referred to in the text. They should be typed on eparate pages, numbered consecutively with Arabic numerals in order of mention in the ext, and collected at the end of the manuscript. Give each table a concise, descriptive eading. Tables should be so composed that the material they contain can be grasped ithout reference to the text.

Figures should be numbered consecutively in the order of their appearance and each hould have a descriptive legend. Indicate magnifications. Line drawings should be made ith India ink on smooth white paper or the equivalent. Where original drawings for the rinter's use are larger in size than 8-½ x 11, enclose smaller, unmounted prints for edi-orial use. Photographs should be unmounted, actual size, labeled and ready for half-tone eproduction. Use glossy prints with strong contrast; photo-offset printing reduces con-rast. When several figures make up a plate, mount them on the back of a piece of photo-raphic paper or indicate in some other way how they should be mounted. Use cardboard nly to protect the package in mailing. The engraver will tool thin white lines between hounted figures later. Maximum size for figures is 5-½″ x 8″ for double column and -⅝″ x 8″ for single column. Where large micrographs are especially helpful, the full age may be utilized (6-⅞″ x 10″). To allow for trimming by the printer, add ⅛″ to width nd ¼″ to length of the original print, and place lettering, including figure numbers, no loser than ¾″ to the margin. Figure numbers and lettering should be uniform size, 4–7 hm high. Indicate on the galley proof where the figures are to be placed. Mark all figures ith the author's name and address. The author will defray the expense for colored lates. Two pages of half-tone figures per article will be published without cost to the au-hor; a charge of $50 per page will be required for pages in excess of this number. Fifty ratis reprints are supplied. Additional reprints may be ordered when galley proof is re-rned.

References to the literature may be cited in one of the following forms: Doe (1955) has observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); (Doe, 1961, p. 250). Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year, e.g., Doe 1960a, b. Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals in accord with Chemical Abstracts' *Service Source Index* (1969 Edition).

Classify your manuscript for editor's indexing when you submit it by answering the following questions:

(1) This manuscript is best described under the category, Developmental Biochemistry____, or Developmental Cytology____, or Developmental Genetics____, or Developmental Physiology____, or Experimental Morphogenesis____.

(2) Two additional key words or phrases for editor's indexing are:

_____; _____.

(3) I $\begin{matrix}\text{do}\\\text{do not}\end{matrix}$ believe the paper should be included in the Journal's list of possible graduate and undergraduate laboratory experiments.

Announcements should be sent to the Editor-in-Chief to arrive by the 15th of the month preceding the issue in which the material is to appear. *News, opinion and letters* should be sent to Dr. Eugene Bell, Department of Biology, Massachusetts Institute of Technology, Cambridge, Massachusetts 02138, U.S.A. The correspondence section is not to be used as a medium for rapid publication of data. It is a forum for active exchange of ideas and opinions about research in developmental biology. Half-tone figures are not accepted, but in suitable cases line drawings will be. Material related to *Current Literature* should be sent to Dr. Francis J. Manasek, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115, U.S.A.

ATTENTION AUTHORS

Photographs submitted for publication **must** be actual size for reproduction. Manuscripts received in the future which do not follow this rule will be returned unreviewed to the authors. The page size of the journal should be considered and the following format observed. (1) Column width figures are to be no wider than 2⅝ in. or longer than 8 in. (2) Page size figures should be 5½ in. wide and no longer than 8 in. (3) If the author decides to bleed the page (no margins), the figure must be 6⅞ × 10 in. (submitted as 7 × 10¼ in. to allow trimming); if the figure to be bled is under this size in either width or length it will not be accepted. Neither this office nor Academic Press has the staff that would be needed for artwork or to properly calculate half-tone reduction. Therefore, in current issues some serious errors in size of half-tone reproductions have been made. In order to correct them from page proof, we would have had to delay publication of the journal and we chose not to penalize the other authors by doing that. **Authors should go over galley very carefully** because page proof is not sent them; be sure line drawings are properly reduced and that none were produced as half-tones by mistake. It is not necessary to submit the original for a line drawing if it is too large; a good copy reproduces well. When preparing line drawings, please keep the page size (5½ × 8 in.) in mind and indicate the reduction. Your cooperation will help us keep our artwork up to standard in this difficult time.

Elizabeth D. Hay
